

Support Coal!

At a time when the coal industry is being attacked on all fronts, all types of public relations are available to win the hearts of the public and our political representatives. Towards this goal, Coal News has engaged the services of international award-winning recording artist and songwriter Stella Parton to produce an exclusive CD of coal mining songs which she calls **American Coal**.

This wonderful album, which is sure to become a collector's edition, contains details of why America runs on coal, as well as a description of the colorful history of this dynamic, modern, advanced technology industry that cares about communities and reclamation, has an excellent safety record that will continue to improve until there are zero accidents, and produces half of the nation's electricity.

Listeners to the CD are urged to support coal by sending letters to their elected representatives in the State Capital and Washington, D.C.

Individual copies may be purchased for \$15 plus postage and handling. Pricing is available for bulk quantities with company logo imprinting included. Contact Raptor Records, a division of Attic Entertainment, atticent@gmail.com or visit www.stellaparton.com.
